Despite Apple's hasty PR reassurance, though, there are indeed key differences between the models: The tablet-style mini 2 is actually thicker, it has slightly worse cameras and speakers, and is \$20 cheaper. It's also 4G LTE-enabled, a major win for international travelers. Apple has some of the same specs in the iPad Air as the iPad mini 2, including an 11.5-inch display with a resolution of 2048 x 1536 and the same A7 processor. And its cameras and other sensors are the same as well: The cameras are also the same, and that's not a particularly big surprise. As far as the other sensor goes, it's the new gyroscope and "Cornerstone" -- which we'll explain in a bit. The two tablets also have the same battery, though the Air will have Apple's own bigger (and more expensive) Smart Battery case. All of the iPads are thinner and lighter than before, and they all have new FaceTime HD cameras. The mini 2 is the only one with two cameras, however, an advantage for use in FaceTime HD video chat. At \$399 for the mini 2 82157476af
