The tournament was considered to be the first truly international rugby sevens tournament, since the sport was being formally recognised as a sport by the international sporting authorities. Rugby union legend John Eales was the chief executive of the organising committee. Rugby union players were not allowed to play for more than one side at a time, which resulted in the All Blacks defeating France in the semi-finals. The tournament was run on a round-robin system, with the sides split into four groups of four teams. There were eight sevens matches each day, with each game lasting 15 minutes, with a five-minute half-time break. Sixteen teams competed in the tournament: eight representing Canada, four from England (two playing as Scotland), two from Ireland, two from Scotland, two from Wales and two from New Zealand. Several players were selected for all seven matches; only four received game-time with more than one team. The tournament concluded on 4 June at the Hong Kong Stadium. Teams There were eight teams competing in the tournament. The prior art drum type rotary engine has the advantage of providing a compact package of the various components therein contained, including a relatively large power output. However, it is difficult to increase the power output of such an engine because of the limited space available within the engine and for the piston driving mechanisms. This invention relates to an improvement in the prior art drum type rotary engine which provides an arrangement to improve the combustion chamber, fuel supply, and exhaust as well as a mechanism for providing increased power output.Feature: create user for all topics In order to use the API with pre-configured user As a client admin I want to create user for all topics Scenario 82157476af
